Introduction

The SG-RANGE is an Ultrasonic Range sensor with a smart WiFi interface.

Features

| | |
|------------------------------------|---|
| Distance measuring | <p>Distance is measured and presented in millimetres (mm).</p> <p>Real-time measurements can be viewed locally, or from anywhere in the world¹, accessible by any web browser.</p> <p>Distances can be measured in any direction to any flat surface that is perpendicular to the sensor axis.</p> |
| Calculation | <p>In many cases, the desired measurement is in some other units: for example litres of liquid in a tank.</p> <p>This product allows distance to be converted into some other value. Regular & irregular shaped containers are supported.</p> |
| Data logging | <p>When combined with an openHAB/MQTT² server, past measurements are accessible locally, or from anywhere in the world, accessible by any web browser.</p> |
| Alarms/Actions | <p>When combined with an openHAB/MQTT server, trigger points can be set to trigger events such as:</p> <ul style="list-style-type: none">• Send an alarm email• Turn a smart relay on/off• etc. |
| Low voltage DC power supply | <p>This device is powered by 24 DC. (Power supply not included). No electrician required for installation.</p> |

Table 1 – Available Features

¹ Requires Internet firewall port forwarding

² <https://openhab.org> & <https://mqtt.org>

Hardware

The **SG-RANGE** comes pre-assembled and tested. It consists of:

- A weatherproof enclosure, housing the smart WiFi interface.
- An ultrasonic sensor. The removable feedhorn makes it easy to mount this device in the lid/cover of a tank, or on a suitable bracket.
- A 20m outdoor cable, for the 24 VDC supply.

Requirements

The SG-RANGE requires:

- **Initial Setup**
 - A device with a Web Browser & WiFi interface, located close to the SG-RANGE. A smart-phone, or tablet will usually be sufficient.
- **Operation**
 - A WiFi Access Point (AP) connected to the local LAN³, within the WiFi Range⁴ of the SG-RANGE.
 - A DHCP⁵ server on the LAN.
- **Ongoing Management**
 - Any device with a Web browser and connected to the same LAN as the SG-RANGE.

³ Local Area Network. See https://en.wikipedia.org/wiki/Local_area_network

⁴ See Specifications, page 22

⁵ Dynamic Host Configuration Protocol: See https://en.wikipedia.org/wiki/Dynamic_Host_Configuration_Protocol

Web Browser Interface

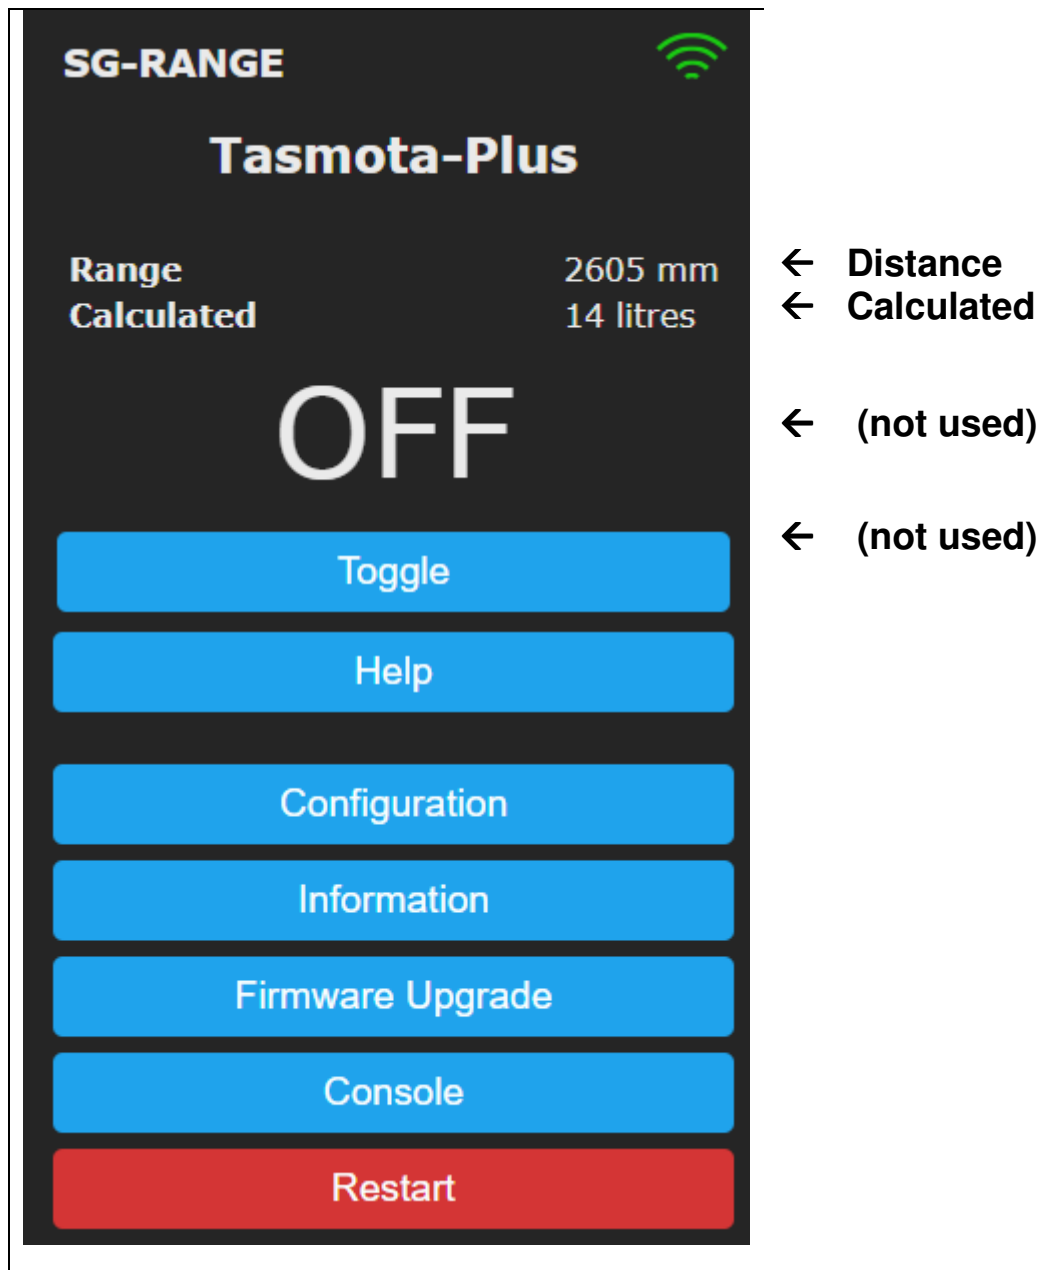

Figure 1 - The Tasmota Web Interface is available from any Web browser

Simply use any web browser to open the web page
`http://<device.ip.address>/`

See documentation here: <https://tasmota.github.io/docs/WebUI/>

Power

The SG-RANGE is powered by 24 VDC. The power supply is not included.

A 20 meter weatherproof cable is included. One end is terminated inside the enclosure. The other end has a standard RJ45 'LAN' connector, making it easy to power this product from widely available 24 V PoE⁶ injectors.

The included power cable is wired as below:

| Conductor | Colour | Usage |
|-----------|--------------------|----------------|
| 1 | Orange/White | Not used |
| 2 | Orange | Not used |
| 3 | Green/White | Not used |
| 4 | Blue | +24 VDC |
| 5 | Blue/White | +24 VDC |
| 6 | Green | Not used |
| 7 | Brown/White | 0 VDC |
| 8 | Brown | 0 VDC |

⁶ Power over Ethernet

Suitable 24 VDC Power supplies

| Power Source | Product Name | Product Link |
|---------------------|-----------------------------|--|
| Main AC | POE-Injector, 24V, 0.5A | https://ubwh.com.au/POE-24-12W  |
| Unregulated DC | POE 9-36 DC to 24V DC | https://ubwh.com.au/POE-DC-24-19W  |
| Solar | 24-48V Solar UPS PoE Switch | https://ubwh.com.au/WI-PS306GF-UPS-V2  |

Mounting

Figure 2 – Sensor Dimensions

The sensor is comprised of 2 parts:

- The sensor body, which is permanently mounted in the SG-RANGE enclosure.
- The Feed horn, which unscrews.

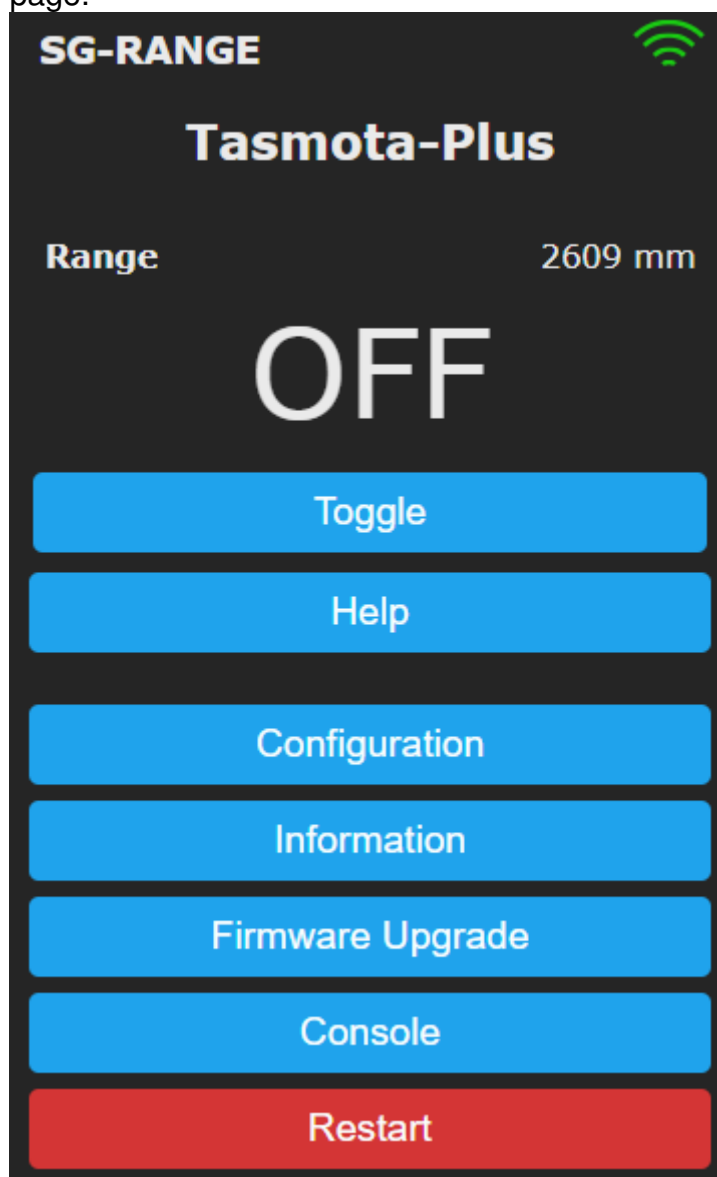

To mount the SG-RANGE

- Drill a 24 mm hole in a mounting plate (e.g. water tank lid)
- Remove Feedhorn
- Insert sensor body into hole
- Screw on feedhorn

Note that the sensor has a *Blind Zone* of 250 mm. (See Specifications). All ultrasonic sensors work on measuring the time of an echo. For that reason they can not measure very short distances. The SG-RANGE can not measure less than 250 mm. For echo distances between zero and 250 mm, the reported value will always be “250 mm”

Getting Started

1. Power the SG-RANGE.
2. Follow the instructions in the ***SS-1CHPro User Guide***⁷ until you see this page.

Note: The Range value will read zero for the first 30 seconds after power up.

⁷ <https://tinyurl.com/28nybtzx>

Configuration Settings

Configure Range Finder

The SG-RANGE has these special Configuration settings:

1. Update interval
2. Calculations

Configure Range Finder

Transmit updates every (seconds, approx.)
Set to 0 (zero) to disable all updates

Calculation

☒ **Enable Calculation?**

| Range (mm) | Display Value | Units |
|------------|---------------|-----------------|
| 0 | 0 | e.g. litres (6) |
| 0 | 0 | |
| 0 | 0 | |
| 0 | 0 | |

Update Interval

The sensor makes about 6 measurements per second, but not all measurements are used to update the display.

The update interval sets the number of seconds between updates of:

- The Dashboard page, and
- MQTT⁸ telemetry messages (if enabled)

Setting the update interval to zero disables all updates. The maximum allowed interval is 255 seconds. The default interval is 30 seconds.

⁸ <https://mqtt.org>

Calculation

Calculations are a convenient way to convert the raw distance measurements (mm) to a more meaningful value if using this device to measure (e.g.) water tank volume.

Regular Shapes

To demonstrate this feature, consider the example water tank shown below.

Figure 3 - Example Water Tank - Regular shape

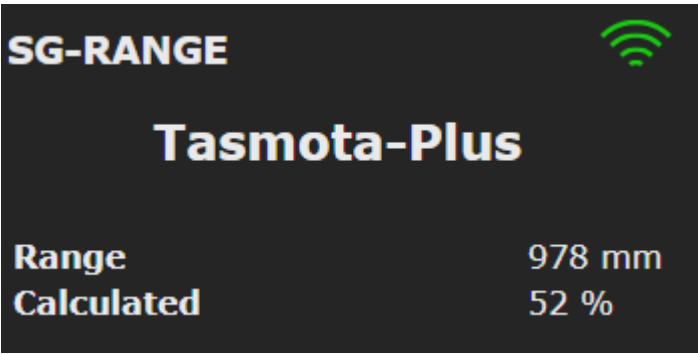

Because this is a **Regular** shaped tank (straight sides), only 2 calibration pairs need to be entered.

In the first case, the calculated value will be percent (%).

Calculation

☒ Enable Calculation?

| Range (mm) | Display Value | Units |
|------------|---------------|-------|
| 1500 | 0 | |
| 500 | 100 | |
| 0 | 0 | % |
| 0 | 0 | |

In the 2nd case, calculated values in litres will be displayed.

Calculation

☒ Enable Calculation?

| Range (mm) | Display Value | Units |
|------------|---------------|--------|
| 1500 | 0 | |
| 500 | 3000 | |
| 0 | 0 | litres |
| 0 | 0 | |

Irregular Shapes

Consider the case of an **Irregular** shaped water tank. In this case we can enter up to 4 calibration pairs to approximate the volume of water in the tank.

Figure 4 - Example Water Tank - Irregular shape

Displaying calculated Percentage.

Calculation

☒ Enable Calculation?

| Range (mm) | Display Value | Units |
|------------|---------------|-------|
| 1500 | 0 | % |
| 1000 | 40 | |
| 500 | 100 | |
| 0 | 0 | |

SG-RANGE 

Tasmota-Plus

Range 943 mm

Calculated 46 %

Displaying calculated litres.

Calculation

☒ Enable Calculation?

| Range (mm) | Display Value | Units |
|---------------|------------------|--------|
| 1500 | 0 | litres |
| 1000 | 1200 | |
| 500 | 3000 | |
| 0 | 0 | |

SG-RANGE

Tasmota-Plus

Range

Calculated

923 mm

1477 litres

Firmware

From time to time, new Tasmota-Plus firmware may be released for your device.

Checking the installed version

Open the Information page and note the **Program Version** currently installed.

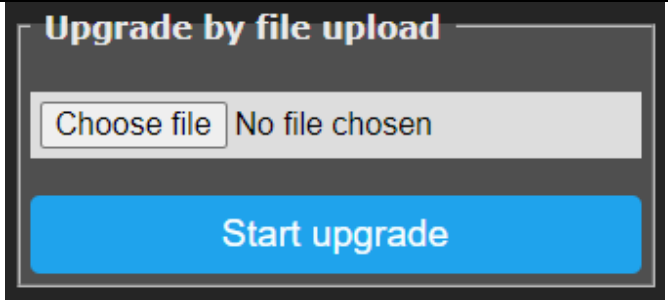

Checking the latest released version

Use your web browser to visit:

<http://ubwh.com.au/tasmota/Tasmota-Plus/SG-RANGE-ReleaseNotes.php>

Updating

If you choose to update the firmware to the latest version, there are two methods.

| | |
|--|--|
| <p>Over The Air (OTA) This is the simplest.</p> <p>Open the Firmware Upgrade page.</p> <p>Enter this OTA Url: http://ubwh.com.au/tasmota/Tasmota-Plus/tasmota-SG-RANGE.bin.gz</p> <p>Click Start upgrade</p> |  A screenshot of a web interface titled "Upgrade by web server". It features a text input field labeled "OTA Url" containing the URL "http://ubwh.com.au/tasmota/Tasmota-Plus/tasmota-SG-RANGE.bin.gz". Below the field is a large blue button labeled "Start upgrade". |
| <p>File Upload With a web browser on your local PC, visit http://ubwh.com.au/tasmota/Tasmota-Plus/tasmota-SG-RANGE.bin.gz</p> <p>Save the file on your local computer.</p> <p>Open the Firmware Upgrade page.</p> <p>Choose the file just downloaded.</p> <p>Click Start upgrade</p> |  A screenshot of a web interface titled "Upgrade by file upload". It features a button labeled "Choose file" next to the text "No file chosen". Below this is a large blue button labeled "Start upgrade". |

Factory Reset Procedure

See the *SS-1CHPro User Guide*⁹

⁹ <https://tinyurl.com/28nybtzx>

http:// Command Interface

Simple commands as below will return the distance, and calculated values

Note: %20 in a URL = Space character

From Web Browser

`http://<device.ip.address>/cm?cmnd=status%208`

From Windows or Linux command/terminal window

`curl http://<device.ip.address>/cm?cmnd=status%208`

From a Windows Batch file (*.bat file)

`curl http://<device.ip.address>/cm?cmnd=status%%208`

Note: need double % characters in a batch file

From a PHP script (*.php file)

```
file_get_contents(  
    'http://<device.ip.address>/cm?cmnd=status%208');
```

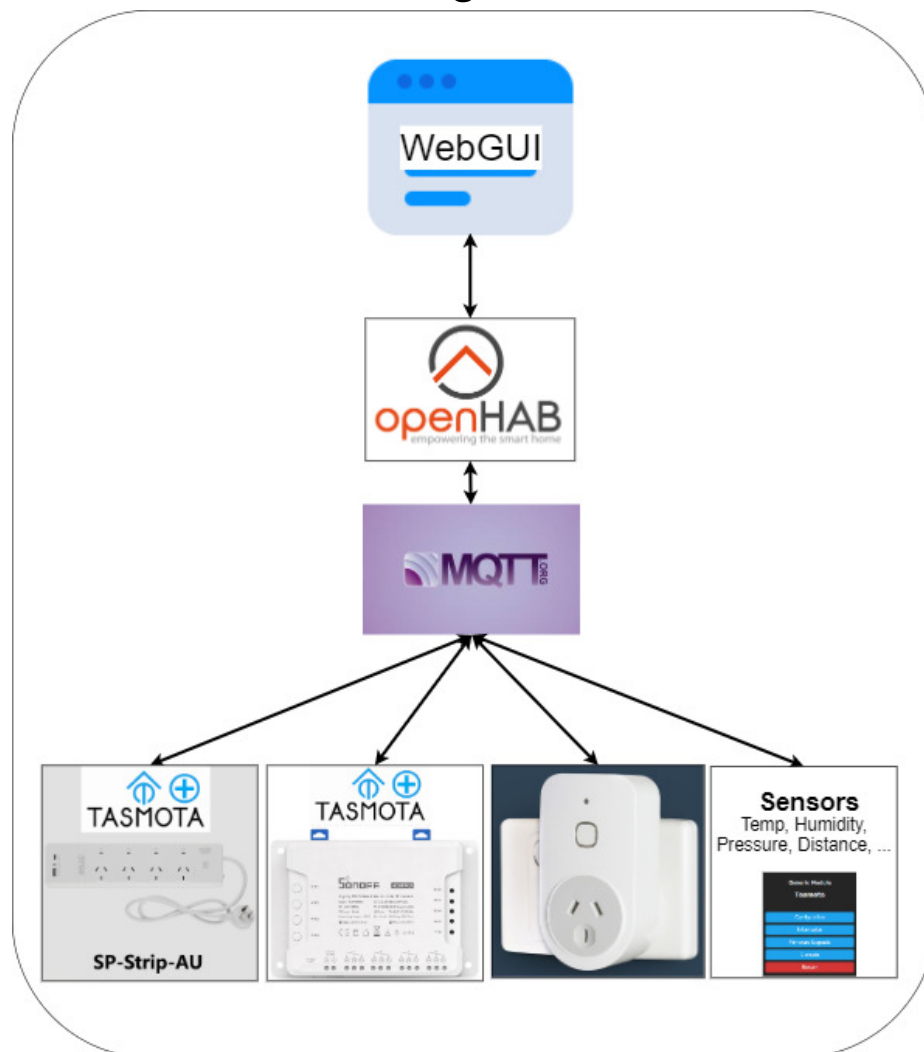

A typical JSON response looks like:

```
{  
  "StatusSNS": {  
    "Time": "2021-04-20T07:01:41",  
    "mm": 942,  
    "computed": 46,  
    "units": "%"  
  }  
}
```

More information:

<https://tasmota.github.io/docs/Commands/#management>

Centralised Monitoring & Control

While this device can operate 100% stand-alone, it can also be monitored and controlled, along with multiple other devices, from a single management platform.

One popular management platform is **openHAB**¹⁰.

In simple terms:

- MQTT compatible devices (e.g. Tasmota) connect to an **MQTT Broker**¹¹.
Status information sent **TO** the MQTT broker.
Commands received **FROM** the MQTT broker.
- **openHAB** also connects to the MQTT broker.
Status information received **FROM** the MQTT broker.
Commands sent **TO** the MQTT broker.
- Users interact via web pages (WebGUI)

¹⁰ <https://www.openhab.org/> (Freeware, Open source)

¹¹ <https://mqtt.org/> (Freeware, Open source)

WebGUI Interfaces

openHAB supports a number of User Interfaces (UIs). Each UI is highly customisable.

The images below show example visualisations.

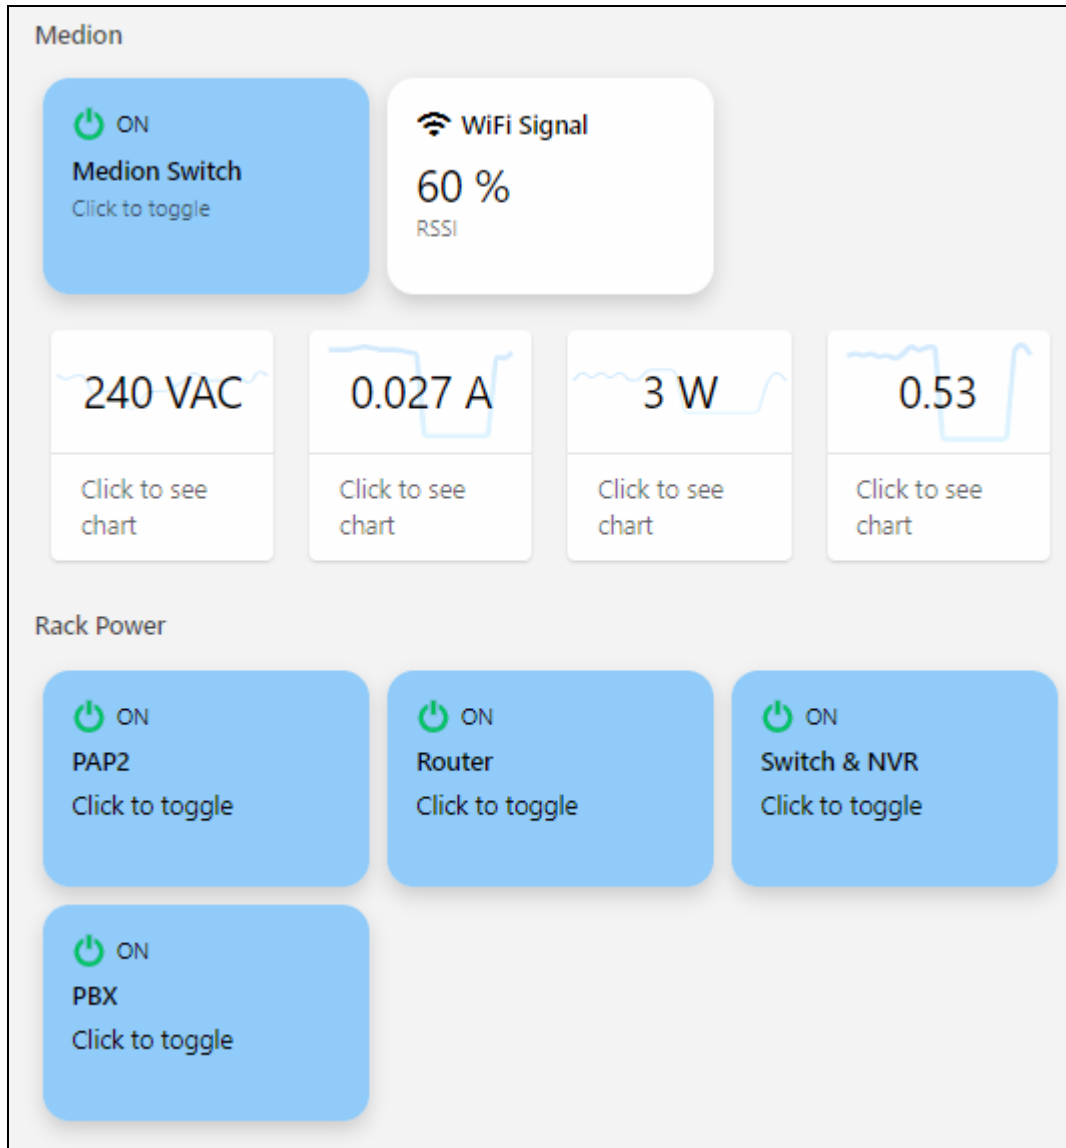

Figure 5 - Classic UI. Mobile friendly.

Figure 6 - Basic UI. Mobile friendly.

Figure 7 - Panel UI. Ideal for touch screens.

openHAB Channel Definition (Example)

Below is shown the channel definition for an SG-RANGE correctly integrated into openHAB.

Values that will be different for each installation have been replaced with XXXXXX.

```
